Design Specification: Bhutan Developer Network (BDN)

Version: 1.0

Design Language: Clean Tech / Minimalist SaaS

Core Objective: Professionalize the Bhutanese tech ecosystem through identity and collaboration.

---

1. Visual Foundation (The "DNA")

To match the screenshots, we use a "Breathable UI" strategy—large margins, tight typography, and subtle depth.

🎨 Color Palette (Hex Codes)

Role	Hex Code	Usage
Surface	#FFFFFF	Main backgrounds and cards.
Subtle Wash	#F8FAFC	Section backgrounds to create depth.
Primary Text	#0F172A	Headings and primary navigation.
Secondary Text	#475569	Body text and descriptions.
Brand Action	#003E6B	Primary CTA (The Deep Navy from the screenshot).
Success/Auth	#10B981	Online status / Verification badges.

🔡 Typography

- **Primary Heading:** Inter (Variable), Weight: 800 (Extra Bold).
    - *Letter Spacing:* -0.04em (This gives that premium "tight" look seen in the image).
- **Body Copy:** Inter or Geist Sans, Weight: 400.
    - *Line Height:* 1.6 for maximum readability.
- **Monospace:** JetBrains Mono (For snippets or "Developer Stats").

---

2. Component Architecture (High Level)

A. The Global Header (Navigation)

- **Left:** BDN Logo (Uppercase, Bold, tight kerning).
- **Center:** Text-only links: Directory, Projects, Help Feed, Events.
- **Right:** Login (Ghost Button) | Join Network (Small Navy Pill Button).

B. The "Hero" Section (Above the Fold)

- **Structure:** Single-column centered flexbox.

- **Headline:** max-w-4xl, centered. *"Hire vetted creators"* becomes **"Build the future of Bhutanese Tech."**
- **Sub-text:** *"Skip the sourcing"* becomes **"The single source of truth for Bhutanese developers, engineers, and designers."**
- **CTA:** A single, large, high-contrast Navy button: Get Started.

C. The "Reputation" Grid (Replacing the User Profiles)

Instead of floating circular images, we will use **"Identity Cards"** that animate on scroll:

- **Card Specs:** White background, 1px Border (#E2E8F0), Soft Shadow (0 10px 15px -3px rgba(0,0,0,0.05)).
- **Content:** Avatar (Left) + Name/Title (Right) + Top 3 Skills (Tags).

---

3. Interaction Design & UX Logic

The "No-Toggle" User Flow

Since we removed the "I'm a Brand/Creator" switch, we use a **Contextual Onboarding** flow:

1. **Auth:** Sign in with Google/GitHub.
2. **Role Selection:** Single dropdown during onboarding: [Student, Professional, Recruiter/Founder].
3. **Dynamic Feed:** The UI adapts based on selection (e.g., Students see "Mentors Available"; Professionals see "Talent to Hire").

Interaction States

- **Hover States:** Buttons should scale slightly (scale-105) and darken the background color by 10%.
- **Skeleton Loading:** Use subtle grey-to-white gradients for the "Help Feed" to maintain the premium feel while data fetches.

---

4. Technical Implementation Specs (Frontend)

CSS Strategy (Tailwind)

Use the following config to match the "UGC Tank" spacing:

JavaScript

```
// tailwind.config.js

theme: {

  extend: {

    colors: {
```

```
    'bdn-navy': '#003E6B',
    'bdn-slate': '#475569',
  },
  letterSpacing: {
    tightest: '-.04em',
  },
  borderRadius: {
    'pill': '100px',
  }
 }
}
```

Key Components to Build First:

1. Layout.tsx: Handles the responsive wrapper and global navigation.
2. Hero.tsx: The high-impact entry point.
3. FeedCard.tsx: The reusable unit for "Help" posts and "Project" updates.

---

5. Mobile Considerations

- **Navigation:** Collapse into a slide-out "Hamburger" menu.
- **Hero Text:** Scale heading down from text-6xl to text-4xl to prevent awkward line breaks.
- **Touch Targets:** Ensure all buttons are at least 44px in height.
